

# Cisco Devices for Microsoft Teams

Bring exceptional video conferencing to any space with Cisco devices certified for Microsoft Teams.

# Unleash the full potential of Microsoft Teams.

It's time to imagine a better meeting experience. One that's intuitive and packed with intelligence. Where devices are easy to deploy and even easier to manage. And sustainable production, elegant designs, enterprise-grade security—they're all part of the package. It's time for Cisco devices for Microsoft Teams.

Our award-winning Cisco devices, coupled with Microsoft Teams, deliver a comprehensive solution for hybrid work. They're equipped with the most advanced video conferencing hardware, AI-powered noise removal, camera intelligence, and easy-to-use features like content sharing and whiteboarding. From personal offices to large meeting rooms, our devices enable your teams to work together more efficiently and effectively, no matter where they're located.

Whether you're looking to outfit your team with headsets and 4K webcams or upgrading your office spaces, we'll show you how Cisco devices

can take the Microsoft Teams experience from acceptable to exceptional with a new range of certified devices.

See how you can transform any workspace to deliver the best collaboration experience on the market today.

# Workspaces

# Personal Office

For those with a personal office, it's essential to leverage technology that's designed with the flexibility to match your workstyle—whether you need to focus, present, collaborate or ideate.

The **Cisco Desk Pro**, running the native **Microsoft Teams Display** experience in personal mode, is your instant office. It's perfect for video conferences, presentations, and brainstorming thanks to its 4K touchscreen, 71-degree HD camera, and 27-inch anti-glare display. You'll always look your best with **camera intelligence** that automatically frames you in the optimal view, even if you need to stand up or stretch. Plus, a library of **virtual backgrounds** ensure you look professional in any environment. The Desk Pro can also take your ideation sessions to new heights with **digital whiteboarding**: use the dedicated stylus or your finger to draw, annotate, and add digital sticky notes.

If you want to take your meeting to the next level, the **Cisco Board Pro** turns your workspace into a full-featured **Microsoft Teams Room**—providing everything you need for fully immersive conferencing and intuitive digital whiteboarding. It's an all-in-one, hybrid room device with a high-quality 55 or 75-inch display, dual cameras, superior sound system, built-in microphone array, and multiple configuration options to best suit your room and workstyle. And with versatile mounting you can choose from a discreet wall-mount or a portable wheel stand.

Now, your personal office can be an oasis of focus and collaboration. This is what separates the most powerful collaboration devices on the market from everything else.

# Hot Desk

With most employees splitting time between home and the office, hot desking has never been more in demand. The key is to equip these spaces for maximum productivity, so the rotating cast of employees and visitors never skips a beat.

In shared mode, the **Cisco Desk Pro** makes for a versatile hot desking solution. It comes with a beautiful display that helps you quickly identify an available desk. When running the native **Microsoft Teams Display** application, it allows you to book a shared desk and connect to your personal profile and calendar in the blink of an eye.

You can easily see and join native Microsoft Teams meetings and other upcoming meetings from an integrated calendar view. What's more, you can leverage full-featured **Webex Meetings\***—without any reboot or reconfiguration required. Initiate a call, use chat, and access your files stored on **OneDrive**. Desk Pro comes with high-end auto framing intelligence that's built in, so you can move around your space as you

wish, and you'll always stay perfectly in frame. It even charges your laptop while you work—making it an ideal solution for those going back and forth between meeting rooms and a hot desk.

To complete your hot desk setup, just add the **Cisco Headset 720** for crystal-clear audio that helps you remove distractions and stay focused, even with others working around you. Get exceptional sound and all-day comfort with the wireless on-ear design and enjoy enhanced productivity features like a dedicated Microsoft Teams button.

Unlock the potential of your hot desks with devices that bring personalization and intelligence to every space.

# Jump Room

A jump room is meant for times that require extreme focus, so it's only natural that they offer both privacy and the tools you need to get work done. But with workers often dropping in spontaneously, you need a space that can be instantly productive.

The **Cisco Room Navigator**, sitting just outside the jump room door, runs the native **Microsoft Teams Panel** to help orchestrate traffic. The touch-enabled scheduling display shows room availability at a distance with a discreet, multi-color status LED. It displays active bookings in a calendar view and, if the room is available, allows you to reserve a workspace on the spot for an impromptu meeting. Supporting unobtrusive mounting and seamless cable management, the **room booking** panel brings a modern sophistication to any hallway or shared space.

When you enter a jump room, the **Cisco Desk Pro** provides everything you need to focus and collaborate. With the native **Microsoft Teams Display** or **Microsoft**

**Teams Rooms** app, you can join or initiate a video meeting, view your calendar, and run a **Microsoft Whiteboard** session with ease. It can work as a standalone conferencing monitor and even connect to your portable device via **USB-C passthrough** so you can leverage the 27-inch monitor for focused work or for the ultimate BYOD experience.

And since this is a room centered around productivity, Cisco Desk Pro supports rich **content sharing** via HDMI, USB-C, Miracast, and Microsoft Teams Sharing to create engaging presentations.

Every employee can now hop into a jump room, be productive instantly, and show up professionally for their most important meetings.

# Ideation Space

Ideas can spark from anywhere, at any time. But how do you enable anyone in your organization to connect, co-create, share ideas, and solve problems—regardless of whether they are remote or in the office together?

The **Cisco Board Pro** is an all-in-one room collaboration device for hybrid teamwork. This device offers state-of-the-art **digital whiteboarding** and exceptional video meetings. It's designed to catch creative sparks, making it the perfect device for ideation spaces in your office. Available in 55- and 75-inch sizes, it comes with dual 4K cameras, a superior sound system, and active pens for whiteboarding. The Board Pro is also equipped with wheels, which makes it easy to move from room to room, or you can choose to mount it on the wall.

When running the full-featured **Microsoft Teams Rooms** experience, the Board Pro delivers stellar video conferencing and intuitive digital whiteboarding, all in one powerful device. And when the meeting is

over, it's easy to share your whiteboard with internal and external teams, so everyone can continue to iterate after the meeting.

Take it even further with remarkable configuration options: Connect it with the tabletop **Cisco Room Navigator\***, a certified Microsoft Teams Rooms Console, for instant meeting controls, add an external **Cisco PTZ 4K Camera** to infuse intelligent pan-tilt-zoom and **presenter tracking**, and even equip larger rooms by connecting the room device with Cisco conferencing microphones, such as the **Cisco Table Microphone Pro\***.

With Cisco, you can transform an uninspired space into an incubator for co-creation and ideation!

# Small Meeting Room

Most meetings today will include remote participants, making it essential to rethink traditional conference rooms. Your rooms need to create an inclusive experience for all participants—whether they're working from home or at HQ.

The **Cisco Room Bar** was designed to enable all audiences to collaborate. With native support for **Microsoft Teams Rooms**, the video bar solution allows you to natively join Microsoft Teams and Webex\*. You can also join Zoom meetings via direct guest join with just a tap on the **Cisco Room Navigator** touch controller thanks to ultra-HD video and spatial audio everybody can hear and see each other clearly.

Just like other Cisco video devices, Room Bar supports the next-generation camera intelligence that provides intelligent framing for every meeting participant. The **frames** camera mode dynamically crops individuals or groups of people to deliver the best possible framing while keeping in-room context, conveying body language, and providing equitable views of

everyone around the table. This improves the experience for remote participants by eliminating rapid camera switching and jarring transitions, which can cause video fatigue. It also makes everyone inside and outside the room feel more connected and included.

Cisco Room Bar augments the video experience with features like industry-leading **AI noise removal** so sounds generated by keyboard clicks, rustling paper, or coffee machines, won't be heard by other meeting participants.

Now everyone in your meeting—whether in the room or remote—will always have an equal seat at the table.

# Medium Meeting Room

Medium-sized spaces serve different functions and can be used for training, meetings, or ideation. To make these spaces work, IT needs a way to seamlessly scale video conferencing to these spaces and devices need to be able to adapt to the intended purposes of the room.

The **Cisco Room Bar Pro** is an AI-infused video bar purpose-built to bring incredible video conferencing to medium spaces and conference rooms. It's a next-generation appliance purpose-built for medium-sized workspaces to take your Microsoft Teams Rooms experience to a new level with built-in stereo loudspeakers, a dual-lens, 96 MP camera system with motorized tilt, a sophisticated microphone array, and a powerful computing engine. It enables hybrid meetings with intelligent camera views where each participant remains perfectly visible and equally framed, even when sitting at the far-end of the table.

The Room Bar Pro is easy to deploy and scale across different room types without compromising on meeting quality. You can quickly mount it with streamlined cabling

and never have to worry about redundant adapters and dongles to make the equipment work. It provides plug-and-play connectivity with multiple screens, cameras, microphones, and peripherals—including the latest AV over IP room components like the directional **Cisco Table Microphone Pro**—to equip any medium-sized workspace for hybrid work.

Use the Cisco Room Navigator touch controller for instant access to meeting controls and device settings. The control panel makes it easy to select from wired and wireless content sources, making it intuitive to share content via USB-C, HDMI, Miracast or Microsoft Teams Cast. And there's more: you can select from group, speaker, frames, or manual camera modes or enable AI noise removal during your meeting.

# Large Meeting Room

This workspace spans all kinds of meetings, from everyday collaboration to high-stakes sessions. Gather the team together in an immersive workspace and bring in remote participants for extended collaboration that levels the playing field for all.

The **Cisco Room Kit EQ** is an AI-powered collaboration device bundle for large **Microsoft Teams Rooms** spaces. Instantly connect your teams with the push of a button on the **Cisco Room Navigator** touch panel. The multi-lens **Cisco Quad Camera** provides the best view of everyone frames participants individually for a more equitable representation, and can deliver adaptive speaker views, no matter where they are sitting. This bundle also features the **Cisco Codec EQ**, which serves as a connectivity and processing hub by integrating your displays, cameras, microphones, speakers, and other room peripherals.

The Room Kit EQ creates fully immersive conferencing experiences for people in

the room and for those joining remotely. Connect it with multiple **Cisco Table Microphone Pros** for multi-directional, adaptive voice pickup in the largest of spaces, so every meeting is immersive.

And to infuse even more intelligence into your workspace, the Room Kit EQ and Room Navigator come with built-in **presence and environmental sensors** to track conditions around temperature, humidity, air quality, and noise levels. By making the sensor data available in **Control Hub**, Cisco Spaces or third-party analytics dashboards, your team gains valuable insights around room utilization and user behavior, and the necessary intelligence to optimize the workspace.

# Administrative Office

Front- and back-office operations are typically crowded, noisy environments. This causes real problems when agents or administrative workers need to communicate clearly with peers, customers, and partners. As call and video meeting volumes get higher, the issue gets worse, hampering operational productivity.

Cisco webcams and headsets **certified for Microsoft Teams** are an important addition for any organization who has standardized on Microsoft as their main productivity and collaboration tool. The **Cisco Headset 320 Series** is an affordable wired headset for everyday office use with a lightweight design, enhanced productivity features, and a directional microphone that offers background noise reduction.

Workers can quickly join meetings with a dedicated button for **Microsoft Teams meetings**. When it's time for a meeting, users will receive an alert via the LED button and an in-ear notification.

And for an elevated video meeting experience, the **Cisco Desk Camera 4K** can be easily placed on a monitor. Built-in intelligence features include **facial recognition for Windows Hello** and **automatic framing**, so the camera always keeps the user perfectly in frame. Available in two colors, platinum and carbon black, this compact USB webcam can help your workers run meetings in full, vibrant color from any lighting condition.

Soon, every function in the office will be less distracted and more productive.

# Training Room

Attention and interaction are key to successful learning experiences. But in today's hybrid world, with complex schedules and employees in a range of locations, positive learning sessions can be challenging. Your training room needs to be designed to fully engage people in the room, as well as those joining remotely.

Cisco devices support presenter views and provide rich content experiences that are accessible for both live and remote participants. Think of a presenter who moves around while they discuss their topic. Before, video conferencing devices would simply lose the speaker when they moved out of screen. Now, innovations like multi-camera technology, intelligent **presenter tracking**, pan-tilt-zoom and face detection keep the presenter perfectly framed on screen. That's the power of combining the **Cisco Room Kit EQ**, **Cisco Quad Camera**, and **Cisco PTZ 4K Camera**. Presenters and educators hosting hybrid trainings or other sessions from auditoriums, classrooms, and very large spaces can share content and engage with remote participants.

Educators and presenters can add more interactivity to their sessions with **Slido**, which provides polling, Q&A, word clouds and even live quizzes—all integrated into native **Webex Meetings** in Microsoft Teams Rooms mode.\*

Your team can bring the **Microsoft Teams Rooms** experience to the largest spaces by using the Room Kit Pro integrator bundle for specialist AV scenarios where multiple screens, microphones, cameras, and other room peripherals work together to make sure presentation content, speakers, and attendees are seen clearly by everybody.

No matter the size of your group or where they are, your training sessions will be more engaging than ever.

# Take control of your spaces with Control Hub.

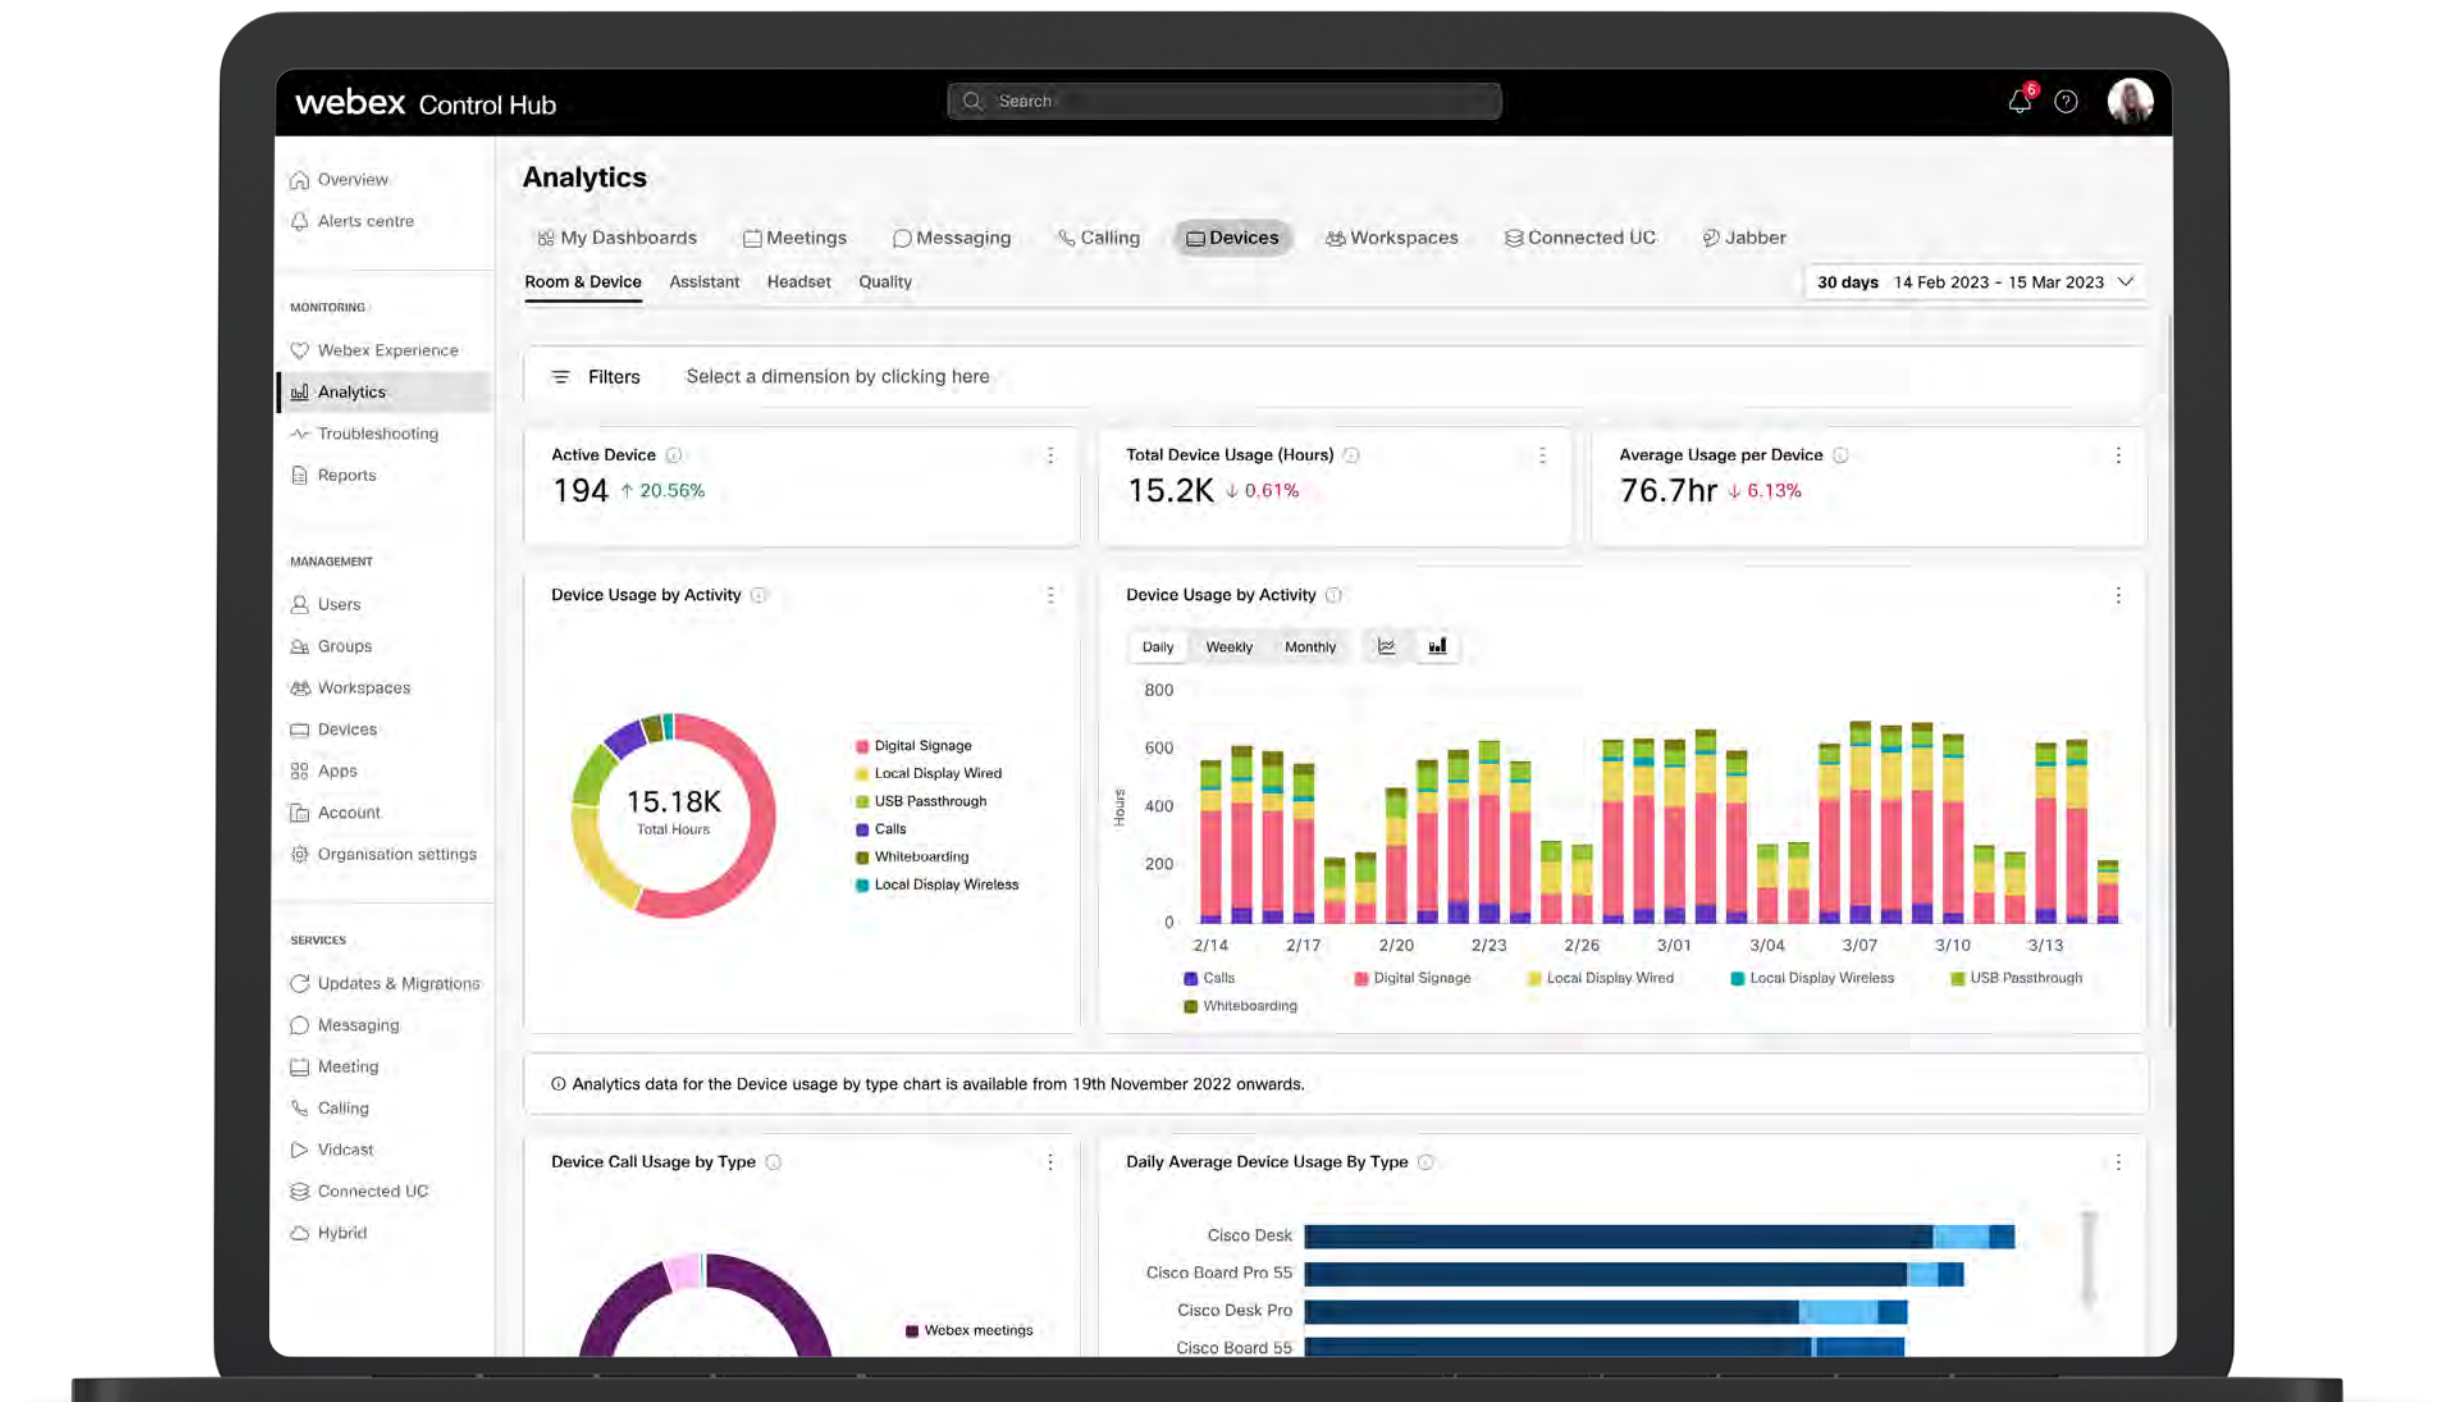

Cisco devices bring exceptional video conferencing experiences to every workspace, but there's more. In addition to our best-in-class devices, we also offer Control Hub as an extension option for Teams Admin Center. Control Hub from Cisco is a game-changing centralized dashboard for managing all collaboration and devices—even remote ones.

It's your single-pane-of-glass portal for remote monitoring, automatic software upgrades, bulk configuration, multi-tenant device controls, and rich device analytics to help you track utilization and optimize the workspace. Your team can monitor data and trends, provision security and privacy controls, update and add new devices, and troubleshoot proactively.

## Benefits of Control Hub:

- Comprehensive device inventory including video endpoints and peripherals
- Advanced device configurations, across single or multi-tenant environments
- Automated and risk-free software upgrades on a monthly basis
- Manage and create device alerts regarding critical events across your entire Cisco deployment
- Rich cloud API integrations for custom device configurations and access to sensor data
- Advanced device utilization analytics
- Comprehensive workspace metrics based on occupancy and environmental conditions

# Built-in device features for Microsoft Teams:

## Camera intelligence

Embedded camera intelligence provides optimized views for every participant.

## Audio intelligence

Market-leading audio intelligence, including advanced noise removal technologies, allows everyone to be heard clearly from anywhere.

## Cloud management\*

Industry-leading cloud device management with Control Hub provides unified admin, monitoring, and analytics - complementing Teams Admin Center.

## Native Webex Meetings\*

Feature-rich, native Webex Meetings on MTR-enabled Cisco devices allow you to easily join Webex and get all the meeting features available in Webex Meetings and Webex Webinars.

## Easy content sharing

Versatile content sharing via USB, HDMI, Microsoft Teams Sharing or Miracast for rich and engaging presentations.

## Environmental sensors\*

Embedded sensors and presence detection provide the insights you need to optimize spaces and create healthier work environments.
